

Our Passive Ventilation Stops Water Damage and Dries Walls.

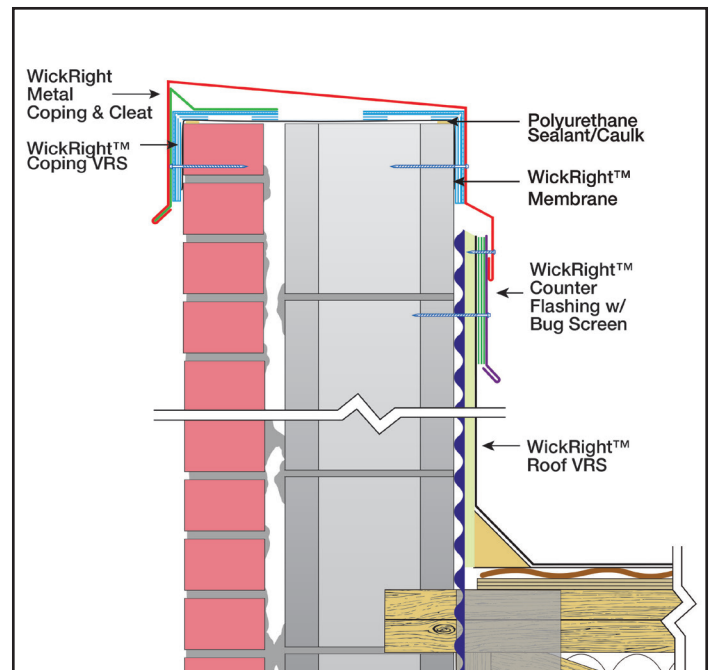

Easy Install, One-Size-Fits-All Parapet Vent

Patented WickRight Metal Coping Vent is a permanent passive ventilation system – a continuous lineal chimney for the entire building.

Wind flowing through Metal Coping Vent portals dries walls via circulation and draws moisture vapor out of the masonry and wall core.

Installation time is minimal. Apply a thin bead of caulk on the exterior and interior edge of the wall, align the Metal Coping Vent on both sides of the wall, install the cleat and coping. We have 41 coping installations in Chicagoland. Call for referrals or to visit a jobsite.

We provides free installation training and owner education to help you easily sell and install WickRight solutions.

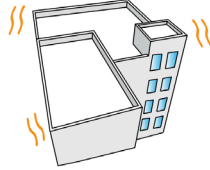

“ Installing WickRight Metal Coping Vent and full coverage metal flashing on the interior of the parapets has solved our building’s leak and smell issues and helped restore property values for the unit owners.”

— Dan Witte, Condo Owner, HOA Board President

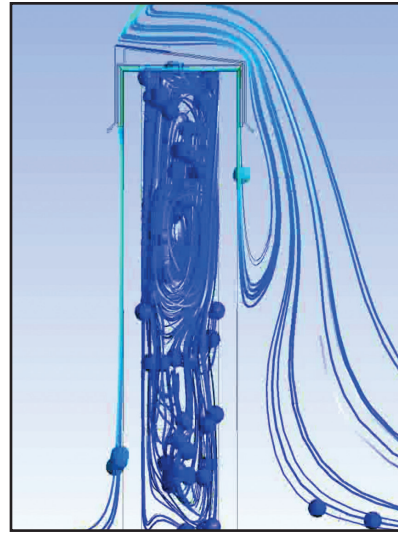

7.2 cubic feet
per minute
per foot

18 MPH Wind Speed

7.2 x 180 = 1296
cubic feet of airflow per minute

CFD simulation shows that Metal Coping Vent increases airflow in parapet walls more than 7.2 cubic feet per minute per lineal foot with an 18 mph wind.

Streamlines show how air enters a wall via Metal Coping Vent on the exterior side of a wall, circulates inside the wall, then exits via Metal Coping Vent on the interior side of the wall.

WickRight Metal Coping Vent™

Available in 8' lengths

Patented. For use under Metal Copings.

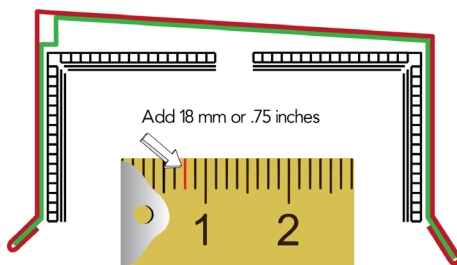

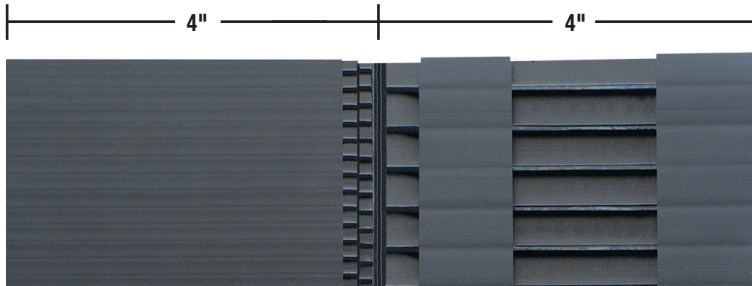

How to Order Coping VRS:

Measure length of walls. One length is needed for **EACH** side of the wall. Multiply the total length by 2, plus 10%.

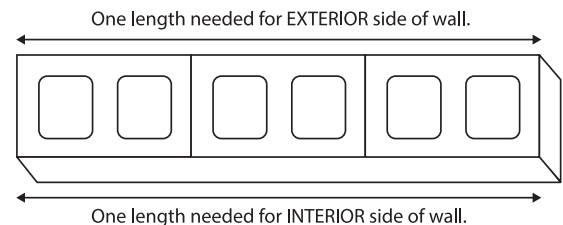

Example:

Perimeter 180 feet. Order 400' ($180' \times 2 = 360' + 10\% = 396'$)

Round up 4' – product comes in 8 ft lengths.
