

PRODUCT NOTICE: Transition to ThermoDrain TDX Series

To our Valued Plumbing Partners,

After three years of research and development—driven largely by feedback from the plumbing community—EcoInnovation is proud to announce the release of the **ThermoDrain TDX Series**.

As we phase out the TDH series, please be aware of a significant change in the installation process. The TDX is designed for **Rough-In installation**, as it is now ABS solvent-cemented directly into the main stack.

Key Installation & Product Changes

- **No Mechanical Couplings:** The unit is now integrated via solvent weld. Please coordinate your plumbing work to include the TDX during the rough-in phase.
- **Enhanced Flexibility:** Water connection fittings now **rotate 360 degrees**, allowing for much easier alignment in tight spaces.
- **PEX Compatibility:** Crimp PEX connections are available immediately. Expansion PEX options are scheduled for release in **Fall 2026**.
- **Improved Handling:** The new design is significantly lighter, making overhead installs easier on the crew.
- **Certified Safety:** The TDX remains fully certified to **CSA B55.2** and features double-wall cross contamination protection.

We appreciate your continued partnership as we move toward this more efficient design. Please reach out to your representative if you have questions regarding the new installation workflow.

Best regards,

The EcoInnovation Team
